

## CUSTOM FORMULATIONS

For those who are looking for a unique product, a bit different to what we already offer, we also have a product development service where we can create your own custom formula.

Whether it be a soap free cleanser, a mud clay mask, a fragrance free toner or a body lotion using essential oils, our pharmacist can help to develop your product.

For a fee of \$2000, our cosmetically trained pharmacist will spend 3-4 weeks researching, testing and developing the product using your requests. During this 3-4 week period you will receive up to 3 sample products to trial and provide feedback on any changes you wish to apply to the formula. This fee includes the cost of any ingredients and packaging used, as well as postage costs for the samples.

We do our own in house stability testing to ensure the products do not split, deteriorate or expire within the 1 month period, for any further testing required, this can be arranged by you at your own costs. Generally, unless otherwise advised, your formula will have a 6 months from opening expiry and a 2 year shelf life.

Once you are happy with your formula, you will own sole rights to it and we are not able to sell or provide the formula to anyone else. We will also provide you with a quote to continue supply of your formula including packaging and labelling costs. We have a minimum order quantity of 5 units.

To begin the process of your product development, please email us with a brief summary of the type of product you would like designed along with any requests. *Eg: Facial cleanser with exfoliating properties. No fragrances, no parabens, pink in colour.* We will then reply letting you know whether your request will be achievable and the amount of time we will need to complete the formula. You will then be sent a contract, which will need to be signed and returned along with payment of the \$2000 fee, and then your product development will begin.

**For any extra information regarding this service, please
