

LABELLING REQUIREMENTS

If you wish to have your labels designed and/or printed yourself, here are a few guidelines to follow:

Legal requirements:

- Full ingredients to be listed in descending order (as per our product information)
- Quantity contained in the product (i.e. 50ml/100ml)
- Product name

For more information about ingredient labelling, please refer to the Mandatory standard for ingredient labelling of cosmetics.

<https://www.productsafety.gov.au/publication/ingredients-labelling-on-cosmetics-supplier-guide>

Recommended information:

- General storage and safety instructions such as:
 - *KEEP OUT OF REACH OF CHILDREN
 - *CAUTION: For external use only.
 - *If irritation occurs, wash affected areas and discontinue use.
 - *Store below 25 degrees Celsius & out of direct sunlight
 - *discard 6 months after opening
 - *Clinic/provider contact details e.g.: email address/phone number
 - *User instructions e.g.: Apply daily in the mornings after cleansing

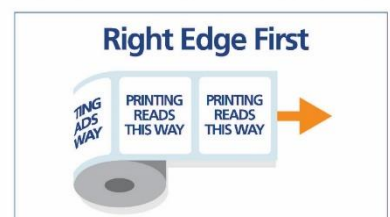

If you are providing your labels already printed for us to apply:

- Labels are to be provided on a roll (not sheets or individual stickers). Label rolls require a black mark between each label for our label machine and is required to be printed as below.
- *You need to keep track of your label stock when ordering.

If you are providing your label design to us for printing:

- Please pass on the label file requirements to your graphic designer (on next page)
- The label design cannot be more than 20% of solid colour. If your label contains more than 20% of solid colour, there will be an additional fee of 50 cents per label printed.

Outside Wound

Please note:

If providing your own label design, ACPHARM cannot be held responsible for any label errors or legal requirements. ACPHARM do not proof read label designs. ACPHARM cannot amend or modify any existing label design provided by an external source.

LABEL FILE REQUIREMENTS

(for your graphic designer)

Our printer is a CMYK-W Laser Printer. With the exception of a few labels (see Label sizes) all labels are printed on our high quality crystal clear media. Your artwork is required to be sent with transparency unless you require white to be printed. (Bear in mind, White is still a colour and the label needs to remain below 20% ink coverage)

Files Accepted: PDF

Illustrator:

Spot Colours: If Spot Colours are used they need to be made with CMYK. - So convert any Spot Colours to CMYK. To find a **SPOT COLOR**, go to the upper right hand corner of the **SWATCH** window, pull down to **OPEN SWATCH LIBRARY**, then **COLOR BOOKS**. Choose a **PANTONE** solid to process color. All digital presses work in CMYK colours and will get better color matches when they go to convert a Spot Color to CMYK.

Fonts: All fonts **must be OUTLINED** in your artwork to preserve your text when the file is opened on a computer that may not have access to your particular font. When outlining text, make sure that the desired text is selected, go to the **TYPE** drop-down on the top tool bar, and then click **CREATE OUTLINES**. Your text will be outlined and preserved.

Must be converted to a **PDF Format**.

Photoshop:

Spot Colours: Like with Illustrator, if Spot Colours are used, we recommend that you pick an actual Spot Color from the Color Library.

Follow the same steps outlined under **ILLUSTRATOR Spot Colours**.

Fonts: As with ILLUSTRATOR fonts, all PHOTOSHOP fonts **must be OUTLINED** to preserve your text should your file be opened on a computer that does not have your font. To outline fonts, select the **LAYER** tab in the top tool bar, go down to **TYPE**, then over to **CONVERT TO SHAPE**. The **TYPE** will no longer be Text, but rather a Shape.

Must be converted to a **PDF Format**.

SAVING YOUR FILE.

BEFORE Saving Your File – Double Check Your Work:

- Did you check your SPELLING?
- Is the file set up in CMYK colours with a 360 dpi resolution and saved as a PDF?
- Are Spot colours PANTONE solid to process? (**CMYK**)
- Is the Art Board the correct size for the label?
- Are all FONTS outlined?
- Do you have a 2mm Bleed for your design?

Rosehip/Vitamin E oil dropper bottle - 50mm(H) x 100mm(L) (White label)

Lash & Brow wand – 53mm(H) x 65mm (L)

BLEED REQUIREMENTS

A full bleed is when the color bleeds off the label. If your label design or background color is intended to cover the entire surface of the label, please note that we need a 2mm bleed around each edge of the label.

For example, if you have a 50mm x 105mm label where the color bleeds off the edges, you should size your design to 52mm x 107mm as this ensures a 2mm bleed around the entire label.

Its also wise to leave at least 2mm of clear space (i.e. no significant design elements or text) inside the label size to allow for slight shifts during die-cutting.
